

Minutes of RESULTS, PITZ Physics Seminar, 2018-07-12

Project: PITZ

Participants: M. Gross, I. Isaev, G. Shu, R. Niemczyk, S. Sukara, O. Lishilin, Christian

1) Agenda

PITZ operator teaching

Radiation

Fire

PITZ tunnel search

Radiation safety logbook

Temporary access

How often the teachings should be?

Other topics?

Whose duty it is?

Gun central chamber + actuator problem update: after RGA moved closer to chamber, we seem more heavy elements >50, need more baking time. New actuator is oily. Old actuator was put back in. Monday morning to see results.

AOB

2) Results:

PITZ online radiation teaching includes almost every point except fire alarm. Specific training should be done during the shift.

Add on: 1 training per year besides training from shift leader.

Computer watching the safety problem in PITZ.

Operator's personal responsibility to insure no people in tunnel during search.

Record official radiation (Pandora) interlock in logbook.

Temporary access should be logged in radiation logbook. Everybody has to have a key. If not possible, the interlock has to be broken.

Minimum two persons to access tunnel.

Practical teaching is beneficial.

Protocol prepared by H Qian
