

Gun 4.6 reconditioning

H. Qian
11.07.2017

- 18** RF interruptions:
- 7 max reflection (2WCS, 2phase tuning, 3noreason)
- 5 trips
- 4 WG spark (no limiter)
- 2 WG1 vac PMT

Progress & Problems

- > Most slice emittance measurements were done successfully, under analysis
- > ELLA laser tuning
- > QE & Thermal emittance vs gradient
- > 1st beam tuning for electron diffraction

Problems:

- > MBI flicker: bad connections/cables at rack; cables under tension (03.07.2017 23:30, 04.07.2017 03:00)
- > Charge drift from 10 pC to 25 pC, laser drift off BSA
- > VC2 dust
- > High2.ST2 overheated at max current (3.65 A) for 10 min
- > Fastscan/Emcalc slow
- > ELLA synchronization lost 10 times during one shift
- > Low charge (~0.1 pC) diagnostics, noise

- > A) Steerer calibration for H1.ST1 & H1.STA1, H1.ST2 & H1.STA2
 - > B) Compare slit-scan and multi-quad scan between High1.Scr1 and High1.Scr5(LYSO)
 - > C) Reproduce quad-scan from Feb23N/24M, try to understand transfer matrix issues
- All measurements done successfully, analysis TBD!
 - ...despite several problems and delays:
 - Two quads at first didn't work, fixed in second week
 - High1.Q4 only allows 10 A max. (unlike 12A-calibration routine, some scripts needed to be changed and might not provide correct gradient)
 - Matlab/ttfr issues (missing library, fixed by Bagrat)
 - Lots of „noisy frames“ from GetImage.m (maybe adjust it?)
 - Different emittance than in Feb.(0.8 vs. 0.6 for 10pc/BSA2.0)
 - Some data taken at MMMG-10°

- > D) TDS+slit emittance measurement EMSY2->PST.Scr1
 - Manual slit scan (VC) done with TDS on and off
 - Images look promising, even without LYSO
 - Analysis TBD

TDS off
Central slit (50 μm)
PST.Scr1(YAG)

TDS on
Averaged over
30 images

TDS on
Single shot

New version of TDS matlab tool

- ✓ New filename: TDS.m
- ✓ Improved visibility of noise(-cut)
- ✓ Automatic camera gain adjustment (please test!)

Buttons to load old measurements, and to mask certain data points from the linear regression

Automatic camera gain adjustment

Matlab function *SVN/MatlabScripts/TDS/GetImage_AutoGain.m*

```
% Requires GetImage() from SVN/MatlabFunctions
% Only the <camera> parameter (same than in GetImage()) is not optional
function [a, info, gain] = GetImage_AutoGain(camera, sat_min, sat_max, gain_max, sat_color, delay, debug)
% Automatically adjusts the gain of <camera> to a level (0..<gain_max>) at which the
% acquired image contains <sat_min> to <sat_max> saturated pixels (i.e. color >= <sat_color>).
% Waits <delay> seconds between gain adjustment and next image acquisition.
% [a, info,..] contains the final image & info just like avine_tine_read_images
% [..,gain] contains the actual camera gain upon return.
if ~exist('sat_min','var')
    sat_min=1;
end
if ~exist('sat_max','var')
    sat_max=9;
end
if ~exist('gain_max','var')
    gain_max=23;
end
if ~exist('sat_color','var')
    sat_color=4095;
end
if ~exist('delay','var')
    delay=0.1;
end
if ~exist('debug','var')
    debug=0;
end
```

(a slightly modified version exists under *SVN/MatlabFucntions/fauto_gain.m...who did that?*)

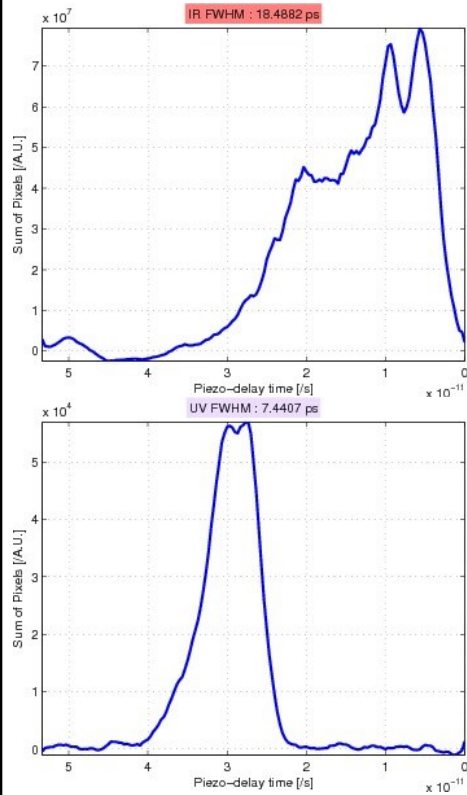

ELLA Overview

- > Alignment & stability issues (as always)
- > UV cross-correlator in operation (destructive)
- > No synchronization till wed (MO source)
- > Faulty JAI UV cross-correlator camera cable (fri)
 - Exchanged Proscilica Sat
- > Pockel cell driver fault (cause: negative timing pulse width)
- > ELLA MMMG phase-shifted to MBI MMMG phase via uTCA
 - general synchronization stability/jitter is poor (PCIe timeouts, slow main loop)
- > Spectrograph rebuilt (fri)
 - Temporal axis calibrated (Yve!)
 - Transport rebuilt (Sun)
- > LT controller fixed (Sun)

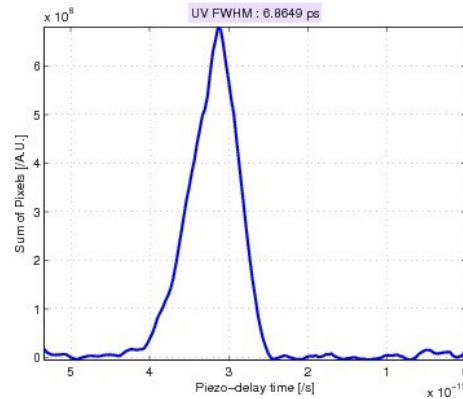

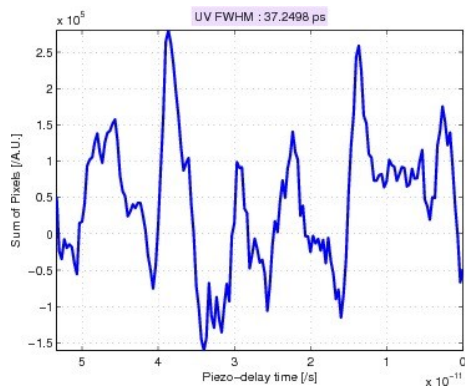

ELLA spectral band mask

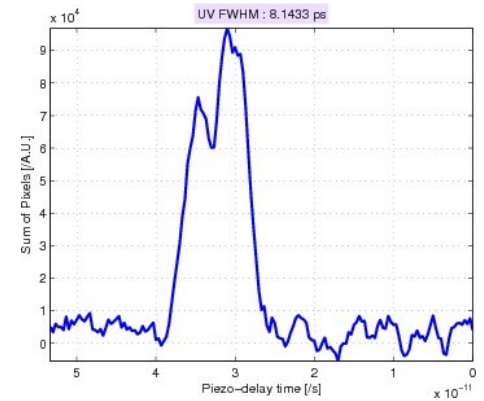

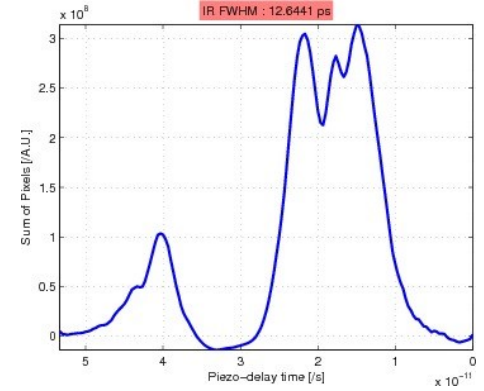

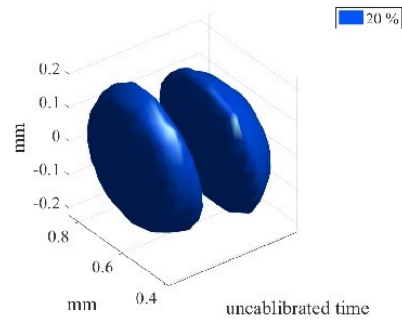

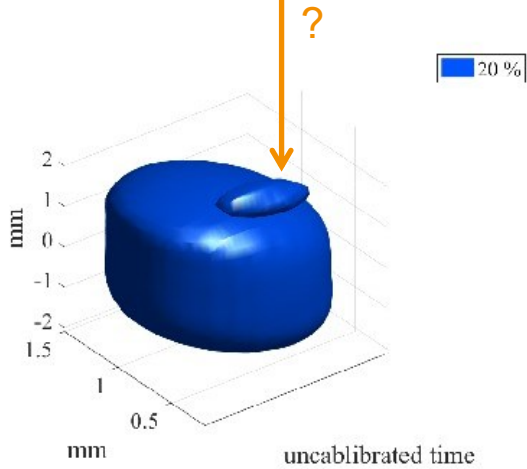

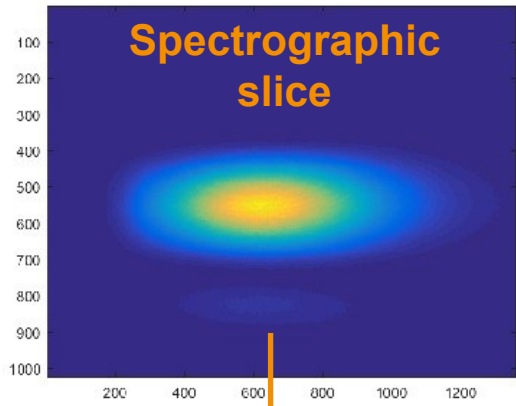

Maskless
